OBJECTIVE OF THE COURSE

Statistical modelling is an important branch in mathematical sciences, which finds utility in almost all areas of sciences, engineering, management and social sciences. The rapid development of computing technology has further raised its importance and placed great demands on its application to real life problems. With the availability of various multivariate techniques and user-friendly statistical software, the ability to analyse large amount of data is not only desirable, but a necessity for any professionals. Such techniques and software are usually very complex and confusing for the uninitiated. There are several issues in this process like selection of appropriate technique, selection of right software, interpretation of results and so forth. The objective of this programme is to emphasize broad range of techniques for data analysis and to foster multi-disciplinary research in these areas.
