The simulation input parameters will be configured through menu driven GUI.
5. The simulator should accept start time and duration of the simulation. Start time can have past, present or future dates.
6. There should be a provision for creating, editing and replaying a simulation scenario.
7. There should be a provision to upload ephemeris data in Yuma and/or Rinex format, from which satellite motion will be simulated during the simulation run.
8. Navigation data and code should be generated and modulated onto the carrier as per the latest GPS ICD.
9. Support for loading a user motion trajectory file should be provided. User position, velocity, acceleration, etc. should be as per the motion trajectory file.
10. While it is not mandatory, support for vehicle dynamics in the form of straight, accelerate, turn, climb and waypoint commands is desirable.
11. There should be at least twelve channels for simulating satellites.
